Action Taken Report on Student's Feedback July - 2026

The institution regularly collects student feedback to improve academic and administrative performance. Feedback for the last semester (Jan. to June 2026) was gathered through structured questionnaires covering teaching quality, curriculum, infrastructure, and support services. The analysis showed that students appreciated faculty commitment but suggested making teaching more interactive and application-oriented. In response, faculty members have been encouraged to adopt ICT-based teaching methods, including presentations, virtual tools, and case-based learning.

Students also recommended the inclusion of skill-based and career-oriented content. To address this, the college has introduced add-on courses, guest lectures, and seminars by experts. Departments are now organizing regular problem-solving sessions and interactive activities to enhance learning outcomes and employability skills.

Feedback regarding infrastructure highlighted the need for improved laboratory equipment and library resources. Necessary upgrades have been made by procuring new instruments and updated books, along with expanding digital library access. Issues related to cleanliness and basic facilities were resolved by strengthening maintenance services and ensuring better sanitation and drinking water facilities.

Additionally, the mentoring system has been reinforced, and grievance redressal mechanisms have been made more transparent and efficient. The institution remains committed to continuous improvement and ensuring a better learning environment for students.
